Reason for Allowance

The following is an examiner's statement of reasons for allowance:

Claims 1, 2, 4, 10, 17-19, and 21-25 are allowed because no single reference or combination of references anticipate or make obvious the above mentioned claims. More specifically, claim 1 requires "A method of orienting a spherical object, comprising: acquiring an image of a spherical object at an imaging station; analyzing the image with a first computer to determine an orientation analysis; transferring the object from the imaging station to orienting stations using a transfer mechanism, the transfer mechanism comprising a rotary indexer having multiple extendable vertical arms, each arm having a vacuum cup for picking-up, holding and carrying the object to a station using vacuum suction so the object does not rotationally slip and the object remains rotationally fixed during transfer from station-to-station; and orienting the object to a predetermined orientation at each orienting station according to the orientation analysis; wherein the orienting stations comprise first, second, and third stations, each station having a motorized, rotating object holder with a vacuum cup for receiving the object from the vacuum cup of the rotary indexer and rotating the object about a single axis; the first, second, and third stations collectively orienting the object by rotation about axes that are alternately perpendicular, the rotating object holder being rotated on a spindle coupled to a motor". Gordon U.S Pat 5,632,205 discloses A method of orienting a spherical object, comprising: acquiring an image of a spherical object at an imaging station; analyzing the image with a first computer to determine an orientation analysis. Further, Carlson U.S Pat 7,283,657 discloses "the transfer mechanism a having multiple extendable vertical arms, each arm having a vacuum cup for picking-up, holding and carrying the object to a station using vacuum suction so

the object does not rotationally slip and the object remains rotationally fixed during transfer from station-to-station; and orienting the object to a predetermined orientation at each orienting station according to the orientation analysis; wherein the orienting stations comprise first, second, and third stations, each station having a motorized, rotating object holder with a vacuum cup for receiving the object from the vacuum cup of the rotary indexer and rotating the object about a single axis; the first, second, and third stations collectively orienting the object by rotation about axes, the rotating object holder being rotated on a spindle coupled to a motor” but fails to disclose rotary indexer.” Further, Osterfeld U.S. Pub 2002/0092731 teaches a rotary indexer. All three reference fail to disclose collectively orienting the object by rotation about axes that are alternately perpendicular. This patentable feature and for at least the reasons set forth above, claims 1, 2, 4, 10, 17-19, and 21-25 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
